

# AirLife Secure™

## **Secure Your Supply Chain With AirLife Secure**

---

AirLife is dedicated to providing the best possible service to all customers through product standardization and simplicity. We are pleased to make essential respiratory and anesthesia consumable products readily available to you through AirLife Secure.

---

## ***You focus on providing great care while we deliver the required products***

---

Providing you with the product you need is within our capabilities and capacities. This means simplifying product options to prioritize performance and availability over customization and complexity. Simplification benefits everyone by reducing lead times, shelf space requirements, complicated ordering processes, reliance on custom products with limited availability, and difficulties in finding substitutes.

When you partner with the reliability of AirLife Secure, your facility will be able to:

- Avoid stock-outs and backorders
- Reduce disruptions to patient care
- Streamline your ordering
- Access substitutes
- Minimize reliance on custom products
- Increase cost savings

With AirLife Secure, you'll be able to confidently stock and maintain the essential products for your hospital or surgery center.

## How does it work?

We have identified a set of common and critical product codes that our customers use regularly, and that we manufacture every day. As a result, we are able to produce and maintain inventory for these codes with ease. To ensure we meet customer demand, we plan to hold a months worth of inventory for these codes.

In the event that you experience a backorder for a product code that is not on this list, we have a solution. We can direct you to a similar product code within this group, and fill your order promptly. This approach helps us serve you better by providing you with alternative options and preventing delays in your supply chain.

## Why are we making this promise?

We understand that preventing supply chain disruptions is a top concern for our customers. In addition to producing required product codes, we are also relocating a significant portion of our manufacturing operations to North America.

This move will help reduce disruptions and ensure that our customers receive the products they need in a timely and reliable manner. We are committed to supporting our customers and will continue to explore ways to improve our operations for their benefit.

## Participating Product Categories

### Airway Management

- Endotracheal Tubes
- Laryngeal Masks
- Stylets

### Anesthesia Circuits and Masks

- Anesthesia Circuits
- CO<sub>2</sub> Absorbent
- Breathing Bags
- Masks

### End Tidal Sampling (ETCO<sub>2</sub>)

- End Tidal Cannulas
- Reflective Cannulas
- Standard Cannulas
- Gas Sampling
- Capnography
- CO<sub>2</sub> Masks

### Humidification and Ventilation

- Ventilator Circuits
- HME & Filters
- Water Products
- Pre-Filled Nebulizers
- CPAP
- NIV Masks

### Oxygen and Medication Delivery

- Oxygen Delivery Cannulas
- Dry Bubble Humidifiers
- Incentive Spirometers
- Medication Nebulizers
- Valved Holding Chambers
- ABG
- Aerosol Masks
- Oxygen Tubing

### Patient Monitoring

- ECG Cables & Leads
- Diagnostic Cardiology
- Pressure Infusion Bags
- Peripheral Nerve Stimulation

### Resuscitation and Hyperinflation

- Manual Resuscitation
- T-Piece Resuscitation
- CO<sub>2</sub> Indicators
- Hyperinflation
- Transport Circuits
- PEEP Valves

### Suction and Oral Care

- Closed Suction
- Open Suction
- Oral Care Kits
- Tracheostomy Care
